

## Chip Carving Pattern: Round Border Coaster

This PDF offers a round-border coaster design that you can use whole, or carve just the outer band and fill the center with your own motif. The version on the left features four-corner chips, making it a satisfying project for more experienced carvers. The right-hand layout is great for beginners because the chips that don't touch each other are easier to carve.

Recommended thickness is between 3/8" and 1/2" (10-15 mm); the minimum is 1/4" (6 mm) for carving chips up to 60 degrees.

See the "[Chip Carving Coaster Set: Winter Theme](#)" article on the READ N TRY site for details and finished piece examples.
